EXCEPTIONAL WINDOWS & DOORS

**Well-chosen colours
can bring life and
interest to your home
in ways you may not
have thought possible.
Great colour choices
reflect your unique
style too.**

Top tips.

- *The most common starting point for choosing colour for external doors and windows is the cladding and roofing on your home. Do you want to provide contrast to the existing colours, blend seamlessly, or complement them with a different shade?*
- *Keep in mind that while your joinery won't need repainting, your house cladding eventually will. So choose colours that will work with any future painting projects you have in mind.*
- *The colours you choose for the outside of your home may jar when seen from the inside. So choose a colour that works both inside and out, or talk with your Fairview manufacturer about a dual colour option.*

50 +

Our range

Our huge range of finishing options (there are over 50 in total) can be used to emphasise, to blend, to highlight and to accentuate the design features of your home. Our colours are also available in matching Hardware Coordinates.

Powdercoated

Powdercoating is one of the most durable colour-coatings available. We powdercoat our windows and doors using our own facilities, accredited to WANZ Enduro Colour Powder Coating Quality Standards, so we know they're built to last. In fact, many of our powdercoat products come with a 15-year guarantee*.

Anodising

Anodising uses an anodic oxide coating to bring out unique colours within the metal of the frame. The result is a stylish, matt metallic finish that's durable and tough wearing.

Eurowood

Eurowood has the warm look and feel of timber, without the associated maintenance issues - no swelling, warping or rotting, and no need to paint. There's a range of wood-grain finishes to select from, and you have the option to choose anodised aluminium on the exterior, and wood grain Eurowood on the interior. Eurowood can also be used on front doors for an eye-catching entrance to your home.

Colour Steel match available.

Please note that roof and powdercoat colours are similar but not the same. Colours displayed are a guide only.

*Powder coating warranties:

Some conditions apply - please speak with your local Fairview manufacturer for more information.

Timberclad

Timberclad combines the strength and durability of aluminium on the outside, with the warmth and distinctive feel of real timber on the inside - joined together by an innovative bonding method. It means you avoid the pitfalls of externally exposed timber, like warping, shrinkage and swelling, while enjoying the timeless beauty of timber inside your home.

Dual colour

By separating our Fairview Thermal window and door frames into exterior and interior components, we give you the opportunity to split the colour and finish on either side. So, for example, you can choose a metallic anodised finish for a sleek street frontage, and Eurowood for a warm, wood-grain finish inside.

Love your view

The environmental impact of our products is important to our customers, and it's important to us. That's why we take care to ensure our production processes are as sustainable as possible.

Our powder coatings don't contain Volatile Organic Compounds (VOCs), they're recyclable during application, they don't contain any toxic heavy metals like lead or chromium, and they've been produced using a sustainable manufacturing process. In fact, they have a lower ecological footprint than most other coating alternatives. And because our coatings are so durable, the need for replacement coatings is reduced.
